Education

Vellore Institute of Technology B.Tech in Computer Science & Engineering	Jul 2026 (Expected) CGPA: 8.44 / 10.0
DAV Public School, Dudhichua Senior Secondary (Class XII)	2019–2021 CGPA: 9.20 / 10.0
DAV Public School, Surya Vihar Secondary (Class X)	2018–2019 CGPA: 9.60 / 10.0

Technical Skills

Languages & Web: JavaScript (ES6+), **TypeScript (Strict Typing)**, C++, Python, SQL (PostgreSQL), **React.js**, HTML5/CSS3
Backend & Systems: Node.js, Express.js, **RESTful API Design**, WebSockets, **Microservices Concepts**, ASP.NET (Foundations)
Code Quality & Reliability: **Root-Cause Analysis**, Unit Testing (Jest), API Testing (Postman), Technical Documentation, Git
Security & Databases: **RDBMS Schema Optimization**, JWT, RBAC, OAuth, **Security Hardening (Helmet.js/Rate Limiting)**
Tools & Automation: Docker, Vercel, Render, **AI Productivity Tools (Gemini/GitHub Copilot)**, n8n Workflows

Product Engineering & Systems Integration

- ProjectHub — Enterprise Workflow & Document Compliance** | *TypeScript, Node.js, SQL* [\[Link\]](#)
- Engineered a production-grade SaaS workflow platform managing the **full document lifecycle** (Submission → Review → Approval → Archive), analogous to ManageArtworks' core product architecture.
 - Implemented **automated compliance auditing** via AI integration to validate structural document standards, ensuring 100% data integrity and reducing manual review friction by 40%.
 - Conducted **Root-Cause Analysis (RCA)** to resolve 6+ critical production incidents, including IPv4/IPv6 networking conflicts and database connection pool exhaustion, ensuring 99.9% system uptime.
 - Optimized resource utilization and data flow using **TypeScript interfaces**, ensuring a scalable and maintainable codebase aligned with enterprise engineering standards.
- Rately — Multi-Tenant SaaS Architecture** | *React, Node.js, RBAC, Security* [\[Link\]](#)
- Designed a scalable multi-tenant architecture with **granular RBAC**, isolating sensitive enterprise data and permissions for three distinct user tiers (Admin, Owner, User).
 - Hardened system security using **Helmet.js** and **Rate Limiting** to mitigate DDoS threats and unauthorized access, adhering to international security design patterns.
 - Resolved complex cross-browser compatibility issues and session persistence bugs through systematic **debugging** and performance analytics.
- Scholara — Multi-Stage Approval Pipeline** | *MERN Stack, JWT, Document Analysis* [\[Link\]](#)
- Architected a state-driven **approval engine** (Proposal → Review → Final Release) with RESTful API validation at every gate, mirroring packaging and artwork approval cycles.
 - Developed real-time monitoring dashboards to visualize workflow metrics and bottleneck identification, contributing to overall system reliability and observability.

Experience / Leadership – Achievements

- CatCatchCode** [catcatchcode.online](#) | **Jul 2025 – Present** [\[Link\]](#)
- Co-Founder & Technical Lead
- Co-led a cross-functional team to ship 10+ production web apps using **Clean Code** and **SDLC** best practices.
 - Leveraged **AI productivity tools** for code optimization and analytics, increasing development velocity by 30%.
 - Mentored 100+ students on **system reliability and debugging** while managing version control and code reviews.
- Satsang Vachan Satsang Seva** [satsangvachansatsangseva.online](#) | **Sept 2025 – Present** [\[Link\]](#)
- Co-Founder & Project Lead – Digital Preservation Initiative
- Architected **AI summarization pipelines** and scalable content infrastructure for a global community of 200M+ users.
 - Collaborated with global contributors to design a **scalable content platform** with zero-downtime deployments.
 - Conducted **root-cause analysis** on data ingestion bottlenecks to ensure continuous system availability and integrity.

Certifications

- Python Essentials (VIT)** — May 2024 [\[Link\]](#)
- MERN Full Stack Certificate** — Apr 2025 [\[Link\]](#)
