Education

Vellore Institute of Technology B.Tech in Computer Science & Engineering	Jul 2026 (Expected) CGPA: 8.44 / 10.0
DAV Public School, Dudhichua Senior Secondary (Class XII)	2019–2021 CGPA: 9.20 / 10.0
DAV Public School, Surya Vihar Secondary (Class X)	2018–2019 CGPA: 9.60 / 10.0

Technical Skills

Enterprise Backend: Core Java (Foundations/OOP), C++ (Advanced DSA), Node.js, RESTful Microservices, SQL
Frontend & UI: React.js (Hooks, Context API), Redux Toolkit (RTK Query), TypeScript, Modern CSS (Tailwind)
Software Excellence: Clean Code (SOLID), Clean Architecture, Design Patterns, Technical Documentation
Testing & Quality: Unit Testing (Jest, JUnit Basics), Mocking, API Testing (Postman), TDD Mindset
AI & Cloud: AI/ML API Integration (Gemini/OpenRouter), Data Modeling, Docker, Git, Agile/Scrum

Projects

- ProjectHub — Enterprise Lifecycle & AI Compliance Engine** | *React, TypeScript, Node.js* [\[Link\]](#)
- Engineered a modular full-stack system using **Clean Architecture** and **SOLID principles**, ensuring high maintainability and 100% testability across 15+ RESTful API endpoints.
 - Integrated an **Intelligent Compliance Engine** using LLM-based structured JSON to automate document audits, demonstrating the ability to merge AI/ML APIs into standard enterprise workflows.
 - Achieved high system reliability by implementing **Unit Testing (Jest)** and resolving complex production-level networking (IPv4/v6) conflicts through systematic Root Cause Analysis (RCA).
 - Developed role-based (RBAC) secure document workflows with **TypeScript** for type-safety, reducing technical debt and ensuring strict data integrity in a production environment.
- Rately — Multi-Tenant Scalable Infrastructure** | *React, Node.js, MongoDB, Redux* [\[Link\]](#)
- Designed a scalable **Multi-tenant Architecture** with strict data isolation and Role-Based Access Control (RBAC), following enterprise-grade security standards for Admins and Store Owners.
 - Implemented **System Hardening** using Helmet.js and Rate Limiting to mitigate unauthorized access and DDoS threats, ensuring robust performance under high-concurrency workloads.
 - Optimized frontend state management using **React Hooks and Context API**, reducing re-render latency and enhancing the modularity of the UI component library.
- ParkEasy — Resource Optimization & Smart Infrastructure** | *React.js, Node.js, JWT* [\[Link\]](#)
- Developed an intelligent reservation system focusing on **Resource Optimization**, featuring real-time data persistence and strict schema validation through Mongoose for 100% data consistency.
 - Architected secure authentication flows using **JWT and session management**, adhering to industry-standard security protocols for sensitive user transactional data.
 - Applied **Modular CSS (Modules)** and component-driven design to ensure a maintainable, cross-platform UI, following "Clean Code" standards for readability and scalability.

Experience / Leadership – Achievements

- CatCatchCode** catcatchcode.online – Jul 2025 – Present
- Co-Founder & Technical Lead — VIT [\[Link\]](#)
- Directing a technical initiative within an **Agile framework**, leading a 2-member engineering team to ship 100+ technical modules on Full-Stack and AI architecture.
 - Enforcing **"Clean Code" standards** and SOLID principles through rigorous Peer Code Reviews and technical documentation for a community of 100+ developers.
 - Designed and maintained scalable digital learning products, managing the end-to-end **Product Development Life Cycle (PDLC)** from ideation to production deployment.
 - Mentoring early-career engineers on **Test-Driven Development (TDD)** and debugging complex full-stack issues, fostering a culture of high software reliability.

Certifications

Python Essentials (VIT) — May 2024 [\[Link\]](#)
MERN Full Stack Certificate — Apr 2025 [\[Link\]](#)
